Dear Hiring Manager,

I am writing to express my interest in the Full-Stack / Laravel Developer position at your company. I am a 4th-year Computer Engineering student with solid hands-on experience in full-stack web development, specializing in Laravel, RESTful APIs, MySQL, and scalable backend architectures. Over the past years, I have built multiple production-level applications, completed internships, and contributed to real-world commercial projects.

Most recently, I developed **VidaMath**, a full-featured online math competition and learning platform used by both students and administrators. The system includes multi-module exam flows, dynamic question generation, real-time scoring, ranking, certificate automation, and a full admin dashboard. I also built **Smart Menu**, a multilingual online menu platform with cart, checkout, and payment integration for multiple businesses. These projects helped me improve my skills in Laravel MVC, database modeling, performance optimization, and building maintainable APIs.

During my internship and junior developer role at OSUS Company, I worked on backend API development, database performance optimization, and maintaining/expanding existing Laravel applications. I collaborated with teams using Git workflows, ensuring clean structure, readable code, and maintainability.

I enjoy building scalable and user-focused web applications, learning new tools quickly, and solving problems analytically. I thrive in team environments and continuously improve myself in areas like API design, backend performance, and clean architecture.

I would be excited for the opportunity to bring my skills, energy, and learning mindset to your team and contribute to meaningful projects. Thank you for considering my application. I look forward to the possibility of discussing how I can contribute to your organization.
